CAREER OBJECTIVE

AI Engineer with hands-on experience building production-ready systems across the full AI stack — from LLM fine-tuning and agentic pipeline design to computer vision and RAG architecture. Delivered multiple end-to-end projects spanning multi-agent orchestration, semantic search, and generative AI integration.

EDUCATION

OSTİM Teknik University
Ankara, Türkiye
September 2022 - July 2026
Grade: 3.50

CERTIFICATES

Data Analyst in Python--Datacamp · Link
January 2024
Associate Data Analyst in SQL--Datacamp · Link
June 2025
Backend AI Engineering-FlyRank
October 2026

LANGUAGES

Arabic — Native
English — Fluent
Turkish — intermediate

AZZAM ALSARARI

AI ENGINEER

WORK EXPERIENCE

Backend & AI Engineering Intern (Remote) at FlyRank AI. *July 2026 - Oct 2026*

- Engineered AI Billing Engine: Built a tenant-aware usage metering system in FastAPI & PostgreSQL using micro-USD integer math, per-transaction idempotency, and secure Stripe webhooks.
- Async Pipelines and Auth: Implemented background task processing via Inngest, automated PDF report generation, and secure OAuth2 user authentication middleware.
- Microservices and Infrastructure: Containerized Python backend stacks using Docker, integrated LLM APIs, and built rate-conscious web scrapers.

AI Engineer Intern at BLC Communication and Security Systems, Ankara, Türkiye *July 2025 - July 2026*

- Developed AI-driven solutions for complex optimization and resource allocation problems.
- Fine-tuned and evaluated LLM-based approaches; applied research in LLM mathematical reasoning for VM/resource allocation tasks.
- Collaborated with cross-functional teams to translate technical requirements into production AI implementations.

PROJECTS

Virtual Dressing System (VDS) (2026 / 3 months) Live Demo

AI-powered virtual fitting room that generates a personalized 3D avatar from a single user photo for photorealistic outfit try-on — combining a custom CNN for skin-tone classification, YOLO-based body measurement, local Qwen (Ollama) reasoning for size and color recommendations, 3D SAM for avatar generation, and Vertex AI for virtual try-on in one unified pipeline. FastAPI backend on Hugging Face Spaces GPU · React/Tailwind + Three.js frontend on Netlify.

Matchi - AI Job Matcher (2026 / 2 months) Live Demo

A platform that takes your CV, compares it against real job listings, and tells you how well you match and what skills you are missing. Built a RAG pipeline using Gemini embeddings and Supabase pgvector to retrieve and rank the closest job matches. Connected to external job APIs for live listings. Structured prompts ground Gemini's output into accurate match percentages and skill-gap breakdowns. FastAPI backend, React/Vite frontend on Render.

SKILLS

- **Generative AI & LLM Engineering:** Python, LLMs & RAG, LangGraph, LangChain, Agno, Fine-Tuning (LoRA, QLoRA, Unsloth), Prompt Engineering, Vector DBs, Ollama, Gemini API, OpenAI API.
- **Agentic & Multi-Agent Systems:** Multi-Agent Orchestration, Stateful Graph Design, Tool-Augmented LLM Pipelines.
- **Computer Vision & NLP:** YOLOv8, 3D SAM, Vertex AI, Image Segmentation, NER, Embeddings, Text Classification.
- **Full-Stack & Data Engineering:** React, Vite, FastAPI, Django, REST APIs, Pandas, NumPy, Matplotlib, KNIME, PostgreSQL, Supabase.
- **Deployment & Delivery:** Docker, Hugging Face Spaces, Render, Netlify, Google Cloud, Git & GitHub, Agile / Scrum, Jira.
- **Research & Analytical Thinking:** Applied research in LLM mathematical reasoning; evaluated LLMs for numerical optimization tasks (VM/resource allocation)
